

1858.

VICTORIA.

AGRICULTURAL AND LIVE STOCK

STATISTICS OF VICTORIA,

FOR THE

YEAR ENDING 31ST MARCH, 1858.

PRESENTED TO BOTH HOUSES OF PARLIAMENT BY HIS EXCELLENCY'S COMMAND.

By Authority :
JOHN FERRES, GOVERNMENT PRINTER, MELBOURNE.

REPORT.

SIR,

Registrar General's Office,
Melbourne, September 30th, 1858.

Having recently submitted for general information an abstract of the Agricultural Statistics for the year 1858, shewing the aggregate results for the several counties and pastoral districts of the Colony, I now take leave to present some Supplementary Tables shewing in detail the cultivation, the classification of the holdings, with the distribution and description of the Live Stock.

These Tables are replete with matter of the highest interest to the public, and are well deserving of an attentive analysis, considering especially the important position which agriculture is rapidly attaining in this country.

It appears that in March, 1858, the additional quantity of purchased land of which the occupiers had entered into possession during the preceding twelve months, amounted to 580,785 acres. As the population had increased during that period 58,871 persons, or from 410,766 to 469,637, it follows that for every individual added to the gross population very nearly ten acres were occupied for agricultural purposes, either of grazing or tillage. The proportion, however, will in reality be found to be much higher, if the Chinese arrivals be excluded from the general increase to the population.

Of the total quantity of land, town, suburban, and country, sold up to the 31st December, 1857, amounting to 2,748,415 acres, being at the rate of 6·4 acres per head of the European and native-born population, 2,113,134 acres, or 76 per cent., were occupied at the commencement of the year 1858 with a view to the production of food.

The proportionate extent of the holdings to the general population of the Colony has risen from 3·7 acres for each person in 1857 to 4·5 acres in 1858.

The average extent of purchased land in the *occupation* of individuals in 1858 and 1857 has remained nearly unchanged, having been 206 and 204 acres respectively: the average quantity of land *cultivated* by each holder being likewise the same in both years, namely, 23 acres.

Probably one of the most interesting of the series of tables deduced from the annual industrial statistics of this Colony is that now presented for the first time, in which the holdings are classified according to size, and the quantity of land occupied and cultivated by each class of landholders is shewn separately.

It has been just observed that the average size of the holdings in Victoria is about 206 acres, being far above the average size of the lots of country and suburban lands offered for public sale by the Crown, and shewing a manifest tendency to accumulation. From the commencement of the disposal of the waste lands of this country to the end of the year 1853, the average area of the lots sold, exclusive of town lands, was 146 acres; and, according to a Parliamentary return, it appears that the suburban, special, and country lands sold by auction, together with all lands alienated by selection and pre-emptive right, during the year and a-half ending the 31st December, 1855, averaged only 83 acres per lot.

It will be perceived by the table shewing the average area of holdings in the several counties, that in some of them the variation from the general average of the Colony is very considerable, and that where the accession of a comparatively dense population has been accompanied by a corresponding progress in agriculture, the lands have become much subdivided, and the area of the holdings much smaller than in the grazing counties.

In those parts of the country where the land has been sold in large quantities

without the existence of a proportionate demand for agricultural purposes, it appears to have fallen into the hands of comparatively few proprietors, as in Hampden, where the average area of the holdings is 812 acres, and the proportion of the occupied land under crop is but 2·2 per cent. ; while in those counties where an extensive alienation of the Crown lands has been succeeded by the settlement of a large amount of population, the process of subdivision has prevailed to a great extent, as in the County of Bourke, where the average size is 159 acres, the proportion of occupied land under tillage being 16·1 acres per cent.

It could scarcely be expected with any degree of probability, that the progress of cultivation could have kept pace with the great increase which has taken place of late in the gross extent of the holdings. Thus, while in 1857, for every 1000 acres in occupation 117 were under crop ; in 1858, with a great addition to the quantity of land in occupation, the proportion had fallen to 112 ; and the returns shew that a large proportion of the 2736 new occupiers had each but little more than sufficient for a garden in cultivation, and that they were employed in grubbing, fencing, and other preparations for their first year's crop.

Holdings are smaller than the average of the Colony in the Loddon District, and in Dalhousie, Bourke, Anglesey, Normanby, Talbot, the Murray, and the Wimmera ; in Grant they attain the average extent, and are about 207 acres ; in the agricultural counties of Ripon, Villiers, Dundas, and Evelyn they vary from 219 to 251 acres ; in counties where the grazing interest is paramount, such as Grenville, Follett, Mornington, Heytesbury, Polwarth, and Hampden, the average ranges between 300 and 812 acres.

If, however, recurring to Table V. of the classification of holdings, we except the 868 of 500 acres and upwards, which from the fact of only 3 acres in every 100 being cultivated would appear to be occupied chiefly for grazing purposes, and if we also deduct those under 5 acres, which may be regarded as little better than mere gardens, we shall find that the average size of farms properly so called, is about 90 acres.*

In directing our attention to the number of holdings of each class, we perceive that those of between 50 and 100 acres appear to be most in favor, and next to these are farms of from 100 to 200 acres in extent. It is worthy of note how comparatively small is the number of holdings of between 30 and 50 acres—a fact which would seem to indicate an opinion among our agriculturists that there is some disadvantage attending farms of this size.

With respect to the classification which has been adopted in the following tables, it has been found that, generally speaking, the average of the holdings under 200 acres approaches the medium between the limits assigned to each class : thus the average size of the farms in the class which comprises those of from 50 to 100 acres is 70·1 acres ; and of those in the next class, of between 100 and 200 acres, the average is shewn to be 136·8 acres. The average of those between 200 and 500 acres, however, deviates considerably from the medium, being under 300 acres ; whence it is evident, that in Victoria there is in this class a preponderance of holdings of from 200 to 300 acres in extent. In compiling future tables on this subject, it may be well therefore to subdivide this class.

It appears that but 11·3 per cent. of the occupied purchased land in Victoria is under tillage ; in Scotland, of the area embraced in the agricultural returns, 56 per cent. is under crop ; and in Ireland, 28·5 per cent. By classifying the holdings, it is ascertained that it is among the holders of more than 500 acres that the deficiency is to be found, and that a very high proportion of the land is placed under crop by persons holding less than 500 acres each.

Holders of between 5 and 15 acres cultivate 65·5 per cent. of their lands ; those of the next class holding from 15 to 30 acres cultivate 51·6 per cent. ; while in all the classes under 500 acres a larger proportion is cultivated in Victoria than in Ireland. This is

* "It appears that there are 285,936 farms in Great Britain of the average size of 102 acres ; in England and Wales the farms amount to 225,318, or 111 acres on an average ; in Scotland 56,650 farms have an average size of 74 acres."—*Census of Great Britain.—Report on the Occupations of the People.*

remarkable when it is considered that the bulk of our landholders have but recently entered into possession, and that their farming operations have consequently formed but a prelude to their future scale of cultivation.

More than half the cultivation of this Colony is effected by holders of from 100 to 500 acres, while in Ireland less than one-fourth is the proportion carried on by this class of farmers. Less than a third of our tillage is the work of persons holding under 100 acres, while three-fourths is the proportion carried on by the same class in Ireland.

The largest average per holding under tillage in any county is in Ripon, where it amounts to 46 acres. In Bourke the average is 25·8; in Grant, 23 acres; in Dalhousie, 27 acres; in Villiers, 29 acres; and in Talbot, 22·7 acres.

The proportion of occupied land actually under cultivation in the county of Grant is 11·1 per cent.; in Villiers and in Talbot it is 11·9 per cent.; in Bourke, 16·1 per cent.; and in Dalhousie, 18·2 per cent. These figures are evidence of great energy, and of the employment of much capital and labor by the agricultural body.

The increase of cultivation has been more rapid than that of the population. In 1858 the acreage under tillage was 237,429, being 100 acres for every 199 of the population: in 1857 the number of acres under crop was 179,982, or but 100 for every 228 persons.

One of the most important features presented in these tables is the unquestionable fact that the increase in the quantity of land under crop has amounted to 32 per cent. as compared with the returns of the previous year, and to 106 per cent. on those of 1856. There is now a greater breadth of land under tillage in Victoria than in any other of the Australian Colonies.

The progress in this respect is most observable in the inland counties and in the districts most remote from the capital. Around the various gold fields, and along their approaches, farmers are settling almost as rapidly as the survey and sale of land permit, and in consequence all the more bulky articles of produce have become greatly reduced in price in the interior. This circumstance must tend to augment the welfare of the mining population, and promote their health by placing vegetable and dairy produce within their reach.

The following table will shew at a glance the districts in which the extension of agricultural operations has taken place, and will also afford a means of comparing the extent of land under crop in the various counties, as well as the increase in 1858 as compared with the quantity under cultivation in the previous year.

COUNTIES AND PASTORAL DISTRICTS.	Extent of Land under Crop.		Increase.	
	1857.	1858.	In Extent.	Per Cent.
	acres	acres.	acres.	
Anglesey	308	1,102 $\frac{1}{4}$	794 $\frac{1}{4}$	257·8
Bourke	64,220 $\frac{1}{4}$	74,145 $\frac{3}{4}$	9,925 $\frac{1}{2}$	15·4
Dalhousie	12,589 $\frac{3}{4}$	17,320 $\frac{1}{4}$	4,730 $\frac{1}{2}$	37·5
Dundas	918 $\frac{3}{4}$	1,157 $\frac{3}{4}$	239	26·0
Evelyn	4,323 $\frac{1}{4}$	4,342 $\frac{3}{4}$	19 $\frac{1}{2}$	0·4
Follett	128 $\frac{1}{2}$	166	37 $\frac{1}{2}$	29·2
Grant	42,453 $\frac{1}{4}$	48,461 $\frac{3}{4}$	6,008 $\frac{1}{2}$	14·1
Grenville	3,016 $\frac{1}{2}$	3,560 $\frac{1}{2}$	544	18·0
Hampden	927	1,368 $\frac{1}{4}$	441 $\frac{1}{4}$	47·5
Heytesbury	1,701	1,660
Mornington	3,433	4,173 $\frac{3}{4}$	740 $\frac{3}{4}$	21·5
Normanby	2,714 $\frac{3}{4}$	3,984 $\frac{1}{2}$	1,269 $\frac{3}{4}$	46·7
Polwarth	2,305	3,141 $\frac{1}{2}$	836 $\frac{1}{2}$	36·2
Ripon	4,589	9,252	4,663	101·6
Talbot	8,644 $\frac{1}{4}$	20,446 $\frac{3}{8}$	11,802 $\frac{1}{8}$	136·5
Villiers	14,146 $\frac{1}{2}$	21,513 $\frac{1}{2}$	7,367	52·0
<hr/>				
Gippsland	2,205 $\frac{1}{2}$	2,375	169 $\frac{1}{2}$	7·6
The Loddon	5,947 $\frac{3}{4}$	10,982 $\frac{5}{8}$	5,034 $\frac{7}{8}$	84·6
Rodney	856 $\frac{1}{4}$	1,140 $\frac{1}{4}$	283 $\frac{1}{2}$	33·0
The Murray... ..	4,045	6,698 $\frac{3}{8}$	2,653 $\frac{3}{8}$	65·5
The Wimmera	509	736	227	44·6

It will thus be seen that with a trifling exception there has been an increase in every county, the greatest having been in the county of Talbot, in which alone an addition of 11,802 acres has been made to the area previously under cultivation.

In the southern parts of the Loddon District, adjacent to the Bendigo and Mount Alexander Gold Fields, the extension has amounted to 5034 acres, being an increase of 84·6 on the cultivation of the preceding year.

The encouragement offered by the Ballaarat and Mount Ararat markets has led to an augmentation of 4663 acres in land under crop in Ripon, being an increase of 101·6 per cent.

In the Murray District agriculture has been so far influenced by the traffic to the Ovens Gold Fields as to occasion an increase of the acreage under crop from 4045 to 6698 acres, or 65·5 per cent.

The fertility of the soil and genial nature of the climate of the county of Villiers would seem to have more than compensated for the low prices to be expected in a district so remote from the market, the additional quantity of land placed under cultivation having been 7367 acres, or an increase of 52 per cent.

The counties of Bourke and Grant present a considerable actual increase, although there has not been the same scope for a large relative increase as in those districts into which farming has only been of more recent introduction. Evelyn, formerly occupying a leading position as an agricultural county, has made but little progress during the year, owing, as it is represented, to the non-extension of public roads in that direction.

In the Agricultural Statistics of every country, the inquiry into the proportion of land appropriated to each description of crop is obviously a matter of much interest. It does not appear that there has been any very important change in the system pursued by our farmers during the last three years, as may be seen by the following statement of the proportion of the cultivated land under the principal crops in each of those years:—

		1856.	1857.	1858.
		Acres per cent.	Acres per cent.	Acres per cent.
Wheat	37·0	44·5	36·6
Oats	15·4	13·9	16·9
Barley	1·3	1·2	2·2
Potatoes	9·5	9·0	8·7
Hay	34·8	28·8	31·7

The proportion per cent. of cultivated land under each of the principal crops in the several counties is shewn by the subjoined table:—

COUNTIES AND PASTORAL DISTRICTS.				Wheat.	Oats.	Barley.	Potatoes.	Hay.	Green Forage.
Anglesey	21·8	16·7	1·1	7·0	49·6	...
Bourke	29·5	11·2	2·1	6·2	45·4	1·2
Dalhousie	24·6	29·6	1·5	12·8	30·2	...
Dundas	45·7	10·0	0·6	6·9	31·3	2·4
Evelyn	49·4	22·7	1·3	8·2	16·4	...
Follett	13·8	19·8	...	12·6	50·0	...
Grant	47·6	20·0	2·1	6·4	20·6	0·6
Grenville	19·3	31·7	1·6	13·0	32·3	0·1
Hampden	51·4	26·2	...	9·3	12·5	...
Heytesbury	73·3	2·5	3·7	12·7	6·7	0·1
Mornington	49·2	28·3	3·0	6·4	8·7	1·0
Normanby	59·3	7·9	1·3	6·4	24·2	0·1
Polwarth	47·3	39·4	1·1	4·2	6·6	0·9
Ripon	18·9	22·1	4·4	18·4	34·8	0·4
Talbot	24·4	27·1	3·3	15·1	26·6	0·7
Villiers	72·5	5·1	2·6	10·2	7·6	0·7
—									
Gippsland	32·4	24·8	3·7	12·1	22·6	2·9
The Loddon	9·4	10·1	2·0	8·7	62·1	1·9
Rodney	13·6	6·2	2·4	3·0	70·0	1·1
The Murray	32·3	13·9	1·3	5·2	42·4	0·6
The Wimmera	0·8	5·5	2·3	5·5	82·8	...

The average produce per acre of each of the principal crops in the counties and pastoral districts, and the average for the whole Colony, will be readily perceived from this table:—

COUNTIES AND PASTORAL DISTRICTS.	Wheat.	Oats.	Barley.	Potatoes.	Hay.
	Bushels per acre.	Bushels per acre.	Bushels per acre.	Tons per acre.	Tons per acre.
Anglesey	21·9	21·2	20·0	1·3	1·1
Bourke	17·6	32·6	32·3	3·5	1·9
Dalhousie	22·4	39·1	23·0	1·8	1·8
Dundas	20·9	24·4	24·2	2·7	2·1
Evelyn	14·2	23·3	14·3	3·3	1·2
Follett	26·0	25·0	...	1·7	1·5
Grant	18·0	27·5	21·1	2·2	1·7
Grenville	20·9	27·3	26·2	2·3	1·8
Hampden	28·1	26·7	...	2·3	1·9
Heytesbury	28·8	34·1	35·4	2·7	1·3
Mornington	19·1	26·3	20·9	2·8	1·2
Normanby	21·2	29·4	19·6	2·5	1·6
Polwarth	24·5	29·8	23·2	2·5	1·9
Ripon	37·1	39·9	37·3	2·5	2·7
Talbot	24·9	33·4	32·3	1·8	2·0
Villiers	25·6	27·6	30·5	2·7	1·7
Gippsland	20·5	19·9	17·1	3·0	1·2
The Loddon	18·1	21·2	37·9	0·7	1·2
Rodney	19·1	17·7	23·9	1·1	1·2
The Murray	17·5	24·6	19·3	1·3	1·2
The Wimmera	21·6	32·1	31·9	2·0	1·7
Average of Victoria ...	20·7	31·0	28·9	2·4	1·8

Although the returns which accompany this Report shew an increase in the quantity of land cultivated as vegetable and fruit gardens of 152 per cent., being from 1964 acres in 1857, to 4967 acres in 1858, the excessively high price of vegetables has not been diminished in Melbourne. But while it must be admitted that the season was remarkably dry and unfavorable for market gardens, yet high rents and the want of proper market-places must continue to produce their natural effect in unduly enhancing the cost of produce so essential to the preservation of the public health.

Four hundred and one acres are now planted in vineyards; but unfortunately there was a considerable falling off in the yield last season, owing, it is alleged, to an unusual prevalence of parching weather, the effects of which have proved highly detrimental to the development of the fruit when formed.

In the county of Talbot several instances are reported of the introduction of the sorghum saccharatum. In one case, where a quarter of an acre was sown with this plant, it was observed to contrast favorably with some maize planted in close proximity to it, both as to the number of the stalks and the luxuriance of its growth, and there seems to be an expectation that it will become a favorite in that district as green fodder for cattle.

The produce of the various crops opens up a most interesting subject of investigation; but I am warned by the necessity for condensing this Report to abstain from referring to any but the wheat crop. In this a very serious reduction has taken place, as compared with the produce of the three preceding years, being no less than $2\frac{2}{3}$ bushels per acre for the whole Colony, and the deficiency may be computed at 209,000 bushels, whose estimated value cannot be less than £90,000. The heaviest portion of this loss has fallen upon the farmers in the counties of Bourke, Grant, Evelyn, and Mornington.

Inquiry has been instituted into the causes to which this deficiency may be ascribed. In some places it has been attributed merely to the unusual dryness of the season; while where the heaviest loss has been sustained, and attention has naturally been most directed to the causes which have induced it, the unusual severity of the hot winds which prevailed during the year has been assigned as the cause, the effect having been, it is stated, to dry up and ripen the grain before it had attained its full size.

The greatest amount of injury is attributed to the hot wind of the 31st December, 1857, which, besides having been the highest in temperature, was the longest in duration. Farmers who previously anticipated, from the luxuriant appearance of their fields, a yield of 40 bushels to the acre, obtained frequently but 12 bushels; and it is alleged that those portions of fields facing the north suffered to the extent of four bushels an acre more than those facing the south, or which were sheltered by trees or the ridges of hills.

Taking into account the numerous statements which have been made on this subject, and the varying degrees in which the hot winds appear to have affected the wheat crop, there would seem to be few subjects for inquiry more interesting or more valuable to the practical agriculturists of this Colony than the greater or less prevalence and duration of the hot winds at certain periods, and their effects on the crops in different districts and aspects, according to the season in which the seed has been sown.

The highly important branch of these statistics, which relates to the live stock in the Colony, does not exhibit any important change as compared with the returns of the year 1857. An increase of 7857 in the number of horses may be considered as consequent on the extension of tillage, and the more general substitution of draught horses for teams of working bullocks, as the main roads have been improved and the creeks and rivers bridged over.

While the number of horned cattle shews an increase of 80,424 over the number returned in 1856, there has been a decrease during the past year of 32,076, and also of 8595 in the number of pigs, as stated in the returns. There is, on the other hand, an increase of 124,474 sheep, being nearly double that which took place in the preceding year. The relative proportions of the different kinds of stock may vary from year to year in all countries; but in this Colony it is gratifying to find that an increase of 8 or 9 per cent. has taken place during the last seven years on the aggregate of stock of all kinds, and this, too, in the face of the greatly augmented consumption of animal food, and the withdrawal of so large a portion of the land from pastoral uses for the purposes of tillage, mining, townships, and roads.

It is with much satisfaction I have to report that the collectors are unanimous in bearing testimony to the general willingness of the people to afford them every information and assistance. The instances to the contrary have been very few, and these, generally speaking, have been found among persons whose social position ought to enable them to better appreciate the value of such statistics to the general body of the colonists. Not only have the farmers given the required information freely, but they have treated the collectors with much hospitality, and have appeared solicitous to obtain from them particulars on all points of interest to themselves, such as the best places for obtaining labor, the rates of wages prevailing, and the state of the crops in the districts they have traversed. I am persuaded that the collecting of these Agricultural Statistics has tended to promote much good feeling, and the dissemination of useful information among those engaged in farming pursuits.

The management of this branch of the department, and the preparation of the various tables, have been confided to the able superintendence of Mr. F. A. Corbett, whose services in connection with the Census Returns I have already had the honor of bringing under His Excellency's notice.

I have the honor to be,

Sir,

Your most obedient servant,

NORMAN CAMPBELL,

Registrar General.

To the Honorable the Chief Secretary,
